

POSSIBLE SKELETON PVC PIPE DIMENSIONS

Recommend cutting pieces $\frac{1}{2}$ " longer than what is shown as you can always trim some off but not add any once it is cut. If you don't intend to use PVC joints ([click here to see how to make](#)) but fixed 90° elbow, 45° elbow or straight couplers then add an 1 $\frac{1}{2}$ " to each dimension for arms, legs & shoulders.
